

StockTrim API Sale Orders

<https://api.stocktrim.com/api/salesorders>

POST – Add a Sales order

Required Post Body JSON:

ProductId	String	The product Id. Must match the ProductId of an existing product.
OrderDate	Date (ISO 8601 format)	The effective date the order was made
Quantity	Decimal	The quantity of items sold
UnitPrice	Decimal	The price the item was sold at
LocationCode	String (Optional)	The location code. Only relevant if this is a location specific sales order. Must match on an existing location.
LocationName	String (Optional)	The location name. Only relevant if this is a location specific sales order. If the location code is missing, the location is matched on this.

Example

```
{
  "productId": "ABC123",
  "orderDate": "2020-02-16T20:54:19.914Z",
  "quantity": 15.0,
  "unitPrice": 29.99
}
```

Example with location data

```
{
  "productId": "ABC123",
  "orderDate": "2020-02-16T20:54:19.914Z",
  "quantity": 15.0,
  "unitPrice": 29.99,
  "locationCode": "Akl",
  "locationName": "Auckland",
}
```

GET – Read all sales orders for a product

<https://api.stocktrim.com/api/salesorders?productId=>

Example: `https://api.stocktrim.com/api/salesorders?productId=ABC123`

Returns a JSON list of all sales orders for the specified product. The response objects are the same as the post object above. See Swagger sandbox for example. <https://api.stocktrim.com/index.html>

DELETE – Delete all sales orders for a product

<https://api.stocktrim.com/api/salesorders?productId=>

Example: `https://api.stocktrim.com/api/salesorders?productId=ABC123`

Deletes all sales orders for the specified product.
